**Velpatasvir PK Fact Sheet**

### Details

**Generic Name**  
Velpatasvir

**Trade Name**  
- Epclusa® (co-formulated with sofosbuvir)  
- Vosevi® (co-formulated with sofosbuvir and velpatasvir)

**Class**  
HCV NS5A inhibitor

**Molecular Weight**  
883

**Structure**

![Molecular Structure of Velpatasvir](image)

### Summary of Key Pharmacokinetic Parameters

Velpatasvir is available in a fixed-dose combination product with sofosbuvir or with sofosbuvir and voxilaprevir.

**Linearity/non-linearity**  
Velpatasvir AUC increases in a greater than proportional manner from 5 mg to 50 mg and in a less than proportional manner from 50 mg to 450 mg in healthy volunteers. However, velpatasvir exhibited more than or near dose-proportional increase in exposures from 25 mg to 150 mg in HCV-infected patients.

**Steady state**  
Not reported.

**Plasma half life**  
~15 h

**Cmax**  
259 (54.3) ng/ml (mean, %CV, based on population PK modelling)

**Ctrough**  
42 (67.3) ng/ml (mean, %CV, based on population PK modelling)

**AUC**  
2980 (51.3) ng.h/ml (mean, %CV, based on population PK modelling)

**Bioavailability**  
Not determined

**Absorption**  
Relative to fasting conditions, administration of a single dose of Epclusa with a moderate fat (~600 kcal, 30% fat) or high fat (~800 kcal, 50% fat) meal increased velpatasvir AUC by 34% and 21% and increased Cmax by 31% and 5%, respectively. Velpatasvir, administered as Epclusa, can be taken with or without food.

**Protein Binding**  
>99.5%

**Volume of Distribution**  
Not determined

**CSF:Plasma ratio**  
Not determined

**Semen:Plasma ratio**  
Not determined

**Renal Clearance**  
0.4%

**Renal Impairment**  
No dose adjustment of Epclusa is required for patients with mild or moderate renal impairment. Safety data are limited in patients with severe renal impairment (estimated glomerular filtration rate [eGFR] <30 mL/min/1.73 m²) or end stage renal disease (ESRD) requiring haemodialysis. Epclusa can be used in these patients when no other treatment options are available.

**Hepatic Impairment**  
No dose adjustment of Epclusa is required for patients with mild, moderate, or severe hepatic impairment (CPT Class A, B, or C). Safety and efficacy of Epclusa have been assessed in patients with CPT Class B cirrhosis, but not in patients with CPT Class C cirrhosis.

## Metabolism and Distribution

<table>
<thead>
<tr>
<th>Property</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Metabolised by</strong></td>
<td>CYP2B6, CYP2C8, CYP3A4</td>
</tr>
<tr>
<td><strong>Inducer of</strong></td>
<td>Does not induce metabolising enzymes or transporters via the AhR or PXR receptors [^1] (e.g. CYPs 1A1, 1A2, 1B1, 2A6, 2B6, 2C9, 3A4; UGT1A1; BRCP, MDR1; MRP2, OATP2)</td>
</tr>
<tr>
<td><strong>Inhibitor of</strong></td>
<td>Inhibits P-gp (weak), BCRP (moderate), OATP1B1 (weak), OATP1B3 (weak) [^1]. At clinically relevant plasma concentrations, velpatasvir is not an inhibitor of BSEP, NTCP, OATP1A2, OCT1, OCT2, OAT1, OAT3, MRP2, MATE1 transporters or CYP or UGT1A1 enzymes.</td>
</tr>
<tr>
<td><strong>Transported by</strong></td>
<td>P-gp, BCRP, OATP1B1, OATP1B3</td>
</tr>
