Notes on drug interactions with Ibalizumab:

- Interactions with Ibalizumab initiated within 9 months after stopping subcutaneous LEN.
- Pharmacokinetic interactions shown are mostly with rifabutin, pyrazinamide, pretomanid, moxifloxacin, isoniazid, ethambutol, delamanid, ethionamide, and rifapentine.

- Rifabutin: Potential moderate increase in abacavir exposure with rifabutin but no a priori dose adjustment required.
- Pyrazinamide: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethionamide: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Delamanid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Isoniazid: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
- Ethambutol: Caution with capreomycin as capreomycin and tenofovir-DP concentrations may increase.
